YANTIAN EAST PORT PROJECT ON TRACK

Summer 2025 / Spotlight / Smart Tech
Business Unit: HUTCHISON PORTS YANTIAN

Hutchison Ports YANTIAN marked a significant milestone with the ceremonial receipt of its first batch of automated equipment for the East Port Project. The Project consists of three new 200,000 tonne automated container berths with a shoreline measuring 1,470 metres, a water depth of 18 metres alongside, and a designed annual throughput of 3 million TEU. The newly delivered five double-trolley quay cranes and eight automated rail-mounted gantry cranes represent a major advancement in operational efficiency, sustainability, and smart port development.
